‡First Above Scale is determined by taking the top salary point dividing it by two salary points below it. Round this figure to the third decimal point (using the fourth decimal to determine if the third is rounded up or stays the same). Next, take the top salary point (149235) multiplied by the result of top salary point/two salary points below (149235/142140). Last, round this dollar figure to the nearest whole dollar.
